Application/Control Number: 10/781,037

Art Unit: 2613

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Page 2

2. Claims 1-6 are rejected under 35 U.S.C. 103(a) as being unpatentable over applicant's admitted PRIOR ART figure 2 in view of Liu (6519060).

The applicant's "prior art figure 2" teaches a first ring network (top fiber portion), a second ring loop (bottom fiber portion), a pair of switches (110 and 120), multiplexer (12), demultiplexer (14). Although it does not teach specifics about filters connected to a bypass path, Liu et al teach that it is well known to use filters (302, 402) and an express lane in order to pass signals that are not affected. It would have been obvious to use express lanes in the system of the PRIOR art Figure 2 in order to avoid noise caused in the channels that are not used at a particular ADM. Although Liu does not specify that the filter is an interleaver, it would have been obvious to use an interleaver in the system of Liu if the signals that a particular ADM were using/not using were interleaved signals.

3. Applicant's arguments filed 2-28-07 have been fully considered but they are not persuasive. The applicant argues that Liu et al do not teach that the switch means loops back if there is a failure between nodes. The rejection was based on the applicant's prior art figure number 2 in view of Liu. The prior art figure 2 teaches switching means that loop back if there is a failure between nodes. The applicant's specification teaches that figure 2 is detailed be figure 1, which shows the looping back when there is a failure Art Unit: 2613

between nodes. The difference between the prior art figure 2 and the applicant's invention appears to be the express line, which allows signals to bypass the multiplexer/demultiplexing means. Liu was used to teach such express lines, not the switching means.

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Leslie Pascal whose telephone number is 571-272-3032. The examiner can normally be reached on Monday- Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on 571-272-3022. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
